To: Arium ECM –XDP3 Customers

Subject: **Manufacture Discontinuance (MD) of ECM-XDP3**

Effective immediately, the Arium ECM-XDP3 Run-Control Probe (base product code 512001) is placed in Manufacturing Discontinuance (MD) status.

The ECM-XDP3 is being replaced with the ECM-XDP3e (base product code 512010). The ECM-XDP3e Run-Control Probe is 100% backward-compatible with the ECM-XDP3 in terms of form, fit and function.

This discontinuance has been necessitated by the obsolescence of a component on the ECM-XDP3 design. Requests for repair of ECM-XDP3 probes may also be affected by the obsolescence. If any ECM-XDP3 that is currently under STAR-1 maintenance should need repair that cannot be performed due to the obsolete part, the ECM-XDP3 will be replaced with an ECM-XDP3e. All new orders for either the ECM-XDP3 or the ECM-XDP3e will be fulfilled with the ECM-XDP3e. New quotes from ASSET will specify the ECM-XDP3e.

ASSET believes this transition will be transparent to all current users of the ECM-XDP3. This notification will hopefully help avoid any confusion about the transition. If you have any questions, contact your local field applications engineer (<http://www.asset-intertech.com/Support/Contact-Details>).

Regards,

*Arden Bjerkeli*
